

Key Investor Information

This document provides you with key investor information about this fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

ZEST NORTH AMERICA PAIRS RELATIVE FUND

A Sub-Fund of ZEST ASSET MANAGEMENT SICAV Class R USD LU1532291983

Management Company: Degroof Petercam Asset Services S.A.

Objectives and investment policy

Objective

- Over the long term: exceed the S&P 500 Index while preserving investor's capital. On an ongoing basis: seek positive return regardless of market conditions (absolute return).

Portfolio securities

- The Investment Manager anticipates that under normal market conditions the Sub-Fund will mainly invest in equities and equity related securities from issuers that are incorporated or conduct most of their business in the USA and Canada. The Sub-Fund will also use derivatives for investment purposes or to take advantage of pricing inefficiencies (synthetic short positions), as well as to reduce or cancel out its exposure to various investment risks (hedging).

Investment process

- In selecting investments, the Investment Manager combines uses a range of strategies aiming at taking profit from pricing inefficiencies (Pairs Relative Value) and at exploiting both upward and downward pricing trends.

Designed For

- Investors who want to diversify their portfolios and who have an investment horizon of at least 1 to 3 years.

Sub-Fund's Reference currency EUR

You can place orders to buy or sell Sub-Fund shares on any given Luxembourg business day.

The Sub-Fund issues only accumulation shares (shares in which any income earned is added to the share price).

Terms to Understand

- Derivatives** Financial instruments whose value is linked to one or more rates, indexes, share prices or other values.
- Equities** Securities that represent a share in the business results of a company.
- S&P 500 Index** A measure of the performance of shares issued by US companies.

Risk and reward profile

1	2	3	4	5	6	7
---	---	---	---	---	---	---

- The value of an investment in the Sub-Fund can go up and down. When you sell your shares, they may be worth less than what you paid for them. If your currency as an investor is different from the subscription currency of the Sub-Fund, changes in currency exchange rates could reduce any investment gains or increase any investment losses.
- The risk/reward rating above is based on medium-term volatility (actual or estimated variations in the Sub-Fund's share price over five years). Going forward, the Sub-Fund's actual volatility could be lower or higher, and its rated risk/reward level may be changed.
- The Sub-Fund's risk level reflects the following factors:
 - The addition of debt securities and money market instruments generally tempers the risks associated with equities.
 - The Sub-Fund maintains a widely diversified portfolio.

The rating does not reflect the possible effects of unusual market conditions or large unpredictable events, which could amplify everyday risks and could trigger other risks, such as:

- Default risk** A bond may lose part or its entire value if the issuer is unable to pay interest or repay principal on schedule.
- Derivatives risk** Certain derivatives could increase Sub-Fund volatility or expose the Sub-Fund to losses greater than the cost of the derivative.
- Counterparty risk** The Sub-Fund could lose money if an entity with which it does business becomes unwilling or unable to honor its commitments to the Sub-Fund.
- Management risk** Portfolio management techniques that have worked well in normal market conditions could prove ineffective or detrimental during unusual conditions.
- Operational risk** In any market, but especially in emerging markets, the fund could lose some or all of its money through a failure in asset safekeeping or through fraud, corruption, political actions or any other unexpected events.
- Liquidity risk** Certain securities could become hard to value, or to sell at a desired time and price.
